## BOOK SYNOPSIS

From the longtime New York Times economics correspondent, a closely reported argument for the continuing importance of industry for American prosperity. In the 1950s manufacturing generated nearly 30 percent of U.S. income. Over the past fifty-five years that share has gradually declined to less than 12 percent at the same time that real estate, finance, and Wall Street trading have grown. While manufacturing's share of the U.S. economy shrinks, it expands in countries such as China and Germany that have a strong industrial policy. Meanwhile Americans are only vaguely aware of the many consequences--including a decline in their self-image as inventive, practical, and effective people--of the loss of that industrial base. And yet, with the improbable rise of Donald Trump, the consequences of the hollowing out of America's once-vibrant industrial working class can no longer be ignored. Reporting from places where things were and sometimes still are "Made in the USA"--Albany and New York; Boston; Detroit; Fort Wayne, Indiana; Los Angeles; Midland, Michigan; Milwaukee; Philadelphia; St. Louis; and Washington, D.C.--longtime New York Times economics correspondent Louis Uchitelle argues that the government has a crucial role to play in making domestic manufacturing possible. Combining brilliant reportage with an incisive economic and political argument, *Making It* tells the overlooked story of manufacturing's still-vital role in the United States and how it might expand.
